REACH TRUCKS 48V, 1.4 - 2.5 TONNES

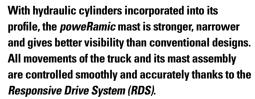

MAXIMISE YOUR PROFITS

THE CAT® NR-N2 REACH TRUCK RANGE IS DESIGNED TO INCREASE YOUR PRODUCTIVITY AND PROFITS BY BOOSTING PERFORMANCE, EMPOWERING OPERATORS AND CUTTING COSTS. IT OFFERS YOU CLASS-LEADING RESIDUAL CAPACITIES, SMOOTHER AND MORE SENSITIVE CONTROL, SUPERIOR ERGONOMICS AND EASIER MAINTENANCE.

The spacious cabin is furnished with a highcomfort Grammer seat, lined walls and convenient storage features. Advanced fingertip hydraulic controls are embedded into an ergonomic, adjustable armrest. Drivers can operate the adjustable steering wheel from a variety of hand positions.

Durable construction, long service intervals and easy access to components keep downtime and repair bills low. A premium, full-colour display with easy-to-learn functionality encourages careful truck use and maintenance. Optional Li-ion batteries add extra energy efficiency and are virtually maintenance-free.

The 11 models include high-performance versions for heavy duties, compact chassis choices for drive-in racking and tight spaces, and straddle-leg trucks for wide pallets. A comprehensive list of mast and fork accessories, and other options, matches trucks perfectly to their tasks.

LOWER COST OF OPERATION

- Robust construction minimises damage and wear.
- Easy access features include tilting and detachable seat, durable plastic machinery cover and tilting battery cover, which combine with long service interval (600 hours) to reduce downtime.
- High-spec display unit encourages correct maintenance, with functions including condition monitoring, fault alarms, diagnostics and servicing interval calculation.
- Removable buffer enables simple and quick drive wheel change, with no need to remove other components.
- Load wheels are positioned outside chassis to simplify service access, with a front cover for defence against collision with racking.
- Wear rails above support legs are easily exchanged to extend truck life.
- Oil tank return and suction filters reduce pump motor's maintenance needs.
- Li-ion battery option adds even greater efficiency and runtime, along with minimal maintenance needs and much longer life, for lower long-term total cost of operation (TCO).

UNMATCHED PRODUCTIVITY

- poweRamic mast enables class-leading capacity retention and lifts up to 13 metres.
- Passive sway control system keeps automatic parking brake open, so sway energy is absorbed by the whole truck's mass, while strong mast design and low-friction sideshift reduce swaying, twisting and noise.
- Active sway control option uses hydraulic pressure sensors and special software to calculate and apply counter-movements, rapidly halt swaying and increase operator confidence.
- Responsive Drive System (RDS) and new-generation controller technology provide sensitive control for driving and mast operations, to make work faster, safer, smoother and more comfortable.
- Full programmability includes user-set performance modes, engineer-customised settings and programmable mast damping.
- $\bullet \ \ \mbox{High-strength gearbox boosts loading capacity, reliability and productivity.}$
- Rigid attachment of driver compartment to strong truck base enables higher lifting, increases residual capacities and enhances driving characteristics.
- Latest reach carriage solution features adjustable clearance rollers for optimised mast behaviour.
- Wide drive wheel (140 mm) improves truck handling and stability, as well as slowing down wear.
- Large oil tank capacity maintains steady oil temperature, for reliable hydraulic functions and consistent load control which enable stable, high lifting.
- Lift height indicator and optional pre-selection maximise accuracy and speed when positioning loads at heights.
- Li-ion battery option increases efficiency and output, especially in intensive, multi-shift, 24/7 operations.
- Wide choice of battery and charger capacities allows the most suitable power supply to be matched to the exact requirements of a specific application.

SAFETY AND ERGONOMICS

- Spacious driver's compartment safely and comfortably accommodates users of all sizes.
- Steering assembly is adjustable in all directions, to suit driver's size and preference, and can be lifted
 upward for easy entry, exit and maintenance access.
- Steering wheel design features notches which allow control from many different hand positions, according
 to the driver's needs and habits.
- Adjustable cushioned armrest houses spring-force-optimised fingertip hydraulic controls and is designed to combine anatomical support with free movement and perfect hand positioning.
- Dual joystick option separates functions such as clamp opening, to avoid accidental moves, and is
 especially useful if fingertip levers are too small for operation with gloves (or large hands).
- Direction control by foot can be programmed as an alternative to switching by hand on the armrest if driver prefers.
- Large, optimally angled and positioned pedals give good control without strain.
- Dual pedal option helps productivity by enabling truck to change direction without the operator needing to use hand controls or adjust foot position.
- Multifunctional display keeps driver fully informed with bright, full-colour readouts in his or her own language, and is optimally positioned and angled for clear viewing.
- Cabin furnishing includes convenient storage features for secure containment of items like drinks, documents, writing pad, pens, tools and phone – and the driver space is attractively lined with comfortable material.
- Grammer seats offer high comfort and ergonomic sitting position, with adjustment for driver size, weight and backrest tilt preference as standard.
- High-performance seat options with mechanical or air suspension offer choices including extra adjustments, additional support features and heating.
- Driver's entry and exit are aided by a wide, deep step, at optimal height, and by hand grips on each side which also protect shoulders when seated.
- Advanced mast, carriage and overhead guard designs give optimum combination of clear forward and upward vision, control and safety.
- Automatic drive speed reduction systems make smooth, stepless adjustments according to steering angle and lift height, to prevent unsafe driver behaviour when cornering or carrying raised loads.
- Reduced reach speed above initial lift adds a further safeguard against accidentally throwing loads from pallets.
- Progressive steering is steplessly adjusted according to drive speed, for optimum response and control.
- Operator presence pedal requires only the driver's leg weight and no effort to maintain its 'dead man' safety function.
- Emergency stop button is easy to reach from armrest.
- Strong battery locking mechanism combines with inbuilt broad battery rollers for fast, easy and safe exchanges.
- Battery change options include table for two batteries, fixed to floor, as well as quick-change system with battery lock pedal and lock-detecting sensor.

LI-ION BATTERIES

TIME TO SWITCH?

Lithium-ion (Li-ion) battery technology is available in the Cat® electric counterbalance and warehouse truck ranges. While lead-acid batteries remain a popular choice for our customers, and still have much to offer, they present various challenges which Li-ion can overcome.

Perhaps the most noticeable change when switching to Li-ion is the use of opportunity charging. Instead of exchanging batteries between shifts, you can simply plug into a fast charger during short breaks and keep the same battery going 24/7. This, together with other efficiency, environmental and safety benefits, makes Li-ion a very appealing alternative.

LONGER LIFE

HIGHER EFFICIENCY

LONGER RUNTIME

CONSISTENT PERFORMANCE

FASTER CHARGING

NO BATTERY CHANGING

NO DAILY MAINTENANCE

INBUILT PROTECTION

Cat Li-ion advantages over lead-acid

Li-ion is an investment which should be viewed against ongoing savings on energy, equipment, labour and downtime.

- **Longer life** 3 to 4 times lead-acid lifespan reduces overall battery investment
- **Higher efficiency** energy losses during charging and discharging are up to 30% lower, so electricity consumption is reduced
- Longer runtime thanks to more efficient battery performance and use of opportunity charges, which can be given at any time without damaging the battery or shortening its lifespan
- **Consistently high performance** with a more constant voltage curve maintains greater truck productivity, even toward the end of a shift
- Faster charging enables full charge in as little as 1 hour with the fastest chargers
- No battery changing fast opportunity charges 15 minutes for several hours of extra runtime enable
 continuous operation with just one battery and minimise the need to buy, store and maintain spares
- **No daily maintenance** the battery stays on board the truck for charging and there is no need for water top-ups or electrolyte checks
- No gas or acid spills avoids the space, equipment and running costs of a battery room and ventilation system
- **Inbuilt protection** intelligent battery management system (BMS) automatically prevents excessive discharge, charge, voltage and temperature, as well as virtually eliminating misuse

Batteries and chargers with different capacities are available. Your dealer will identify the best combination for your needs. You should also ask your dealer about optional 5-year warranties, subject to annual checkups, which give extra peace of mind.
