## Do you need a bigger Cat® forklift? Cat® Lift Trucks introduces 18 to 23 tonne diesel range

*Cat® Lift Trucks has added a new range of high-capacity diesel counterbalance forklifts to its line-up. Their launch brings Cat® quality, durability and performance to a variety of heavier applications. The 18, 20 and 23 tonne Cat DP180-230NE models are primarily specified to meet the market needs of Africa, the Middle East and the CIS.*

With high strength, lifting speed, traction and gradeability, they can deal with huge loads on difficult sites. Their uses include empty container handling, stevedoring, and movement of heavy construction materials.

### **Increased productivity and driver satisfaction**

An advanced package of engineering, technology and ergonomic design enables rapid and precisely controlled operation. It also gives a satisfying driver experience that further enhances productivity.

The turbocharged engine is amongst the strongest, fastest and most efficient in its class. It combines with smooth, responsive, three-speed, automatic powershift transmission for optimum results.

Despite the trucks' large size, manoeuvring is impressively agile thanks to fully hydrostatic assisted steering and a small turning circle. Time is also saved by electronic forward-reverse direction changes.

### **A comfortable workspace**

The driver enjoys a spacious operating compartment with clear all-round views. As well as full suspension and adjustability, the seat has a swivel function. This is a welcome aid to entering, exiting or turning to look behind. From a comfortably seated position, the truck's ergonomically arranged, low-effort controls are easy to reach.

Shock-absorbing features minimise vibration and noise. For extra luxury, a floating weatherproof cabin is optionally available. It can be equipped with options including a high-capacity air conditioner, heater and defroster.

### **Non-stop action and low TCO**

Like all Cat diesel forklifts, the DP180-230NE models are built for long life and non-stop action – whatever the conditions. Their structures, systems and components are resistant to damage and wear, and require minimal maintenance. A time-saving central lubrication option uses a manual pump to grease the main components from one point.

Together with high fuel efficiency, these factors reduce the trucks' total cost of operation (TCO). For dependable, high-strength handling that increases your output and makes sound economic sense, the Cat DP180-230NE range is a great new choice.
