Cat® 4.0 to 5.5 tonne IC engine trucks: uncompromising on performance – but gentle on drivers and the environment

The latest upgrades from Cat® Lift Trucks to its 4.0 to 5.5 tonne diesel and LPG forklifts have reinforced their performance qualities while reducing environmental impacts and increasing driver comfort.

Powerful and environmentally friendly

The diesel range, now designated as DP40-55(C)N3, features a new Stage V compliant engine. This tough, electronically controlled, common rail unit allows each cylinder to work at peak efficiency regardless of load and speed. Meanwhile, the GP40-55(C)N models retain their reliable LPG engine.

Both of these powerful engines deliver high gradeability and travel speeds – two forward and one reverse – for heavy duty tasks. At the same time, they are highly fuel-efficient and meet stringent EU limits on emissions.

Kind to drivers

Low-noise, low-vibration engine design, built into a fully floating powertrain with a smooth transmission system, helps to keep drivers comfortable. The upgrade has also involved fitting all models with an ergonomically shaped, deluxe Grammer seat that gives optimal lumbar support. Meanwhile, a deluxe cabin has been added to the options list.

For extra driver safety, the trucks' features include a ground speed limiter and high-quality, hydraulically controlled drum brakes. A multifunctional LCD display shows safety warnings, keeps drivers informed of truck condition and enables rapid troubleshooting. On diesel models it displays soot status.

The natural choice for heavy duties

High power and a rugged, durable construction are combined with compact, smooth lines for easy manoeuvring in limited space. Typical workplaces requiring these characteristics include ports, construction sites, freight facilities, and metal and brick businesses.

Customers can choose from five diesel and five LPG models, with capacities of 4.0, 4.5, 5.0 or 5.5 tonnes. Each can be fine-tuned to the user's requirements by selecting from a long list of optional extras.
